

Geo-enable, process and publish your enterprise data

Maporama GeoPlatform is a standalone product and may also be used to support your custom applications or in conjunction with the Maporama GeoDashboard and GeoMarketplace solutions.

Geo-enable your data:

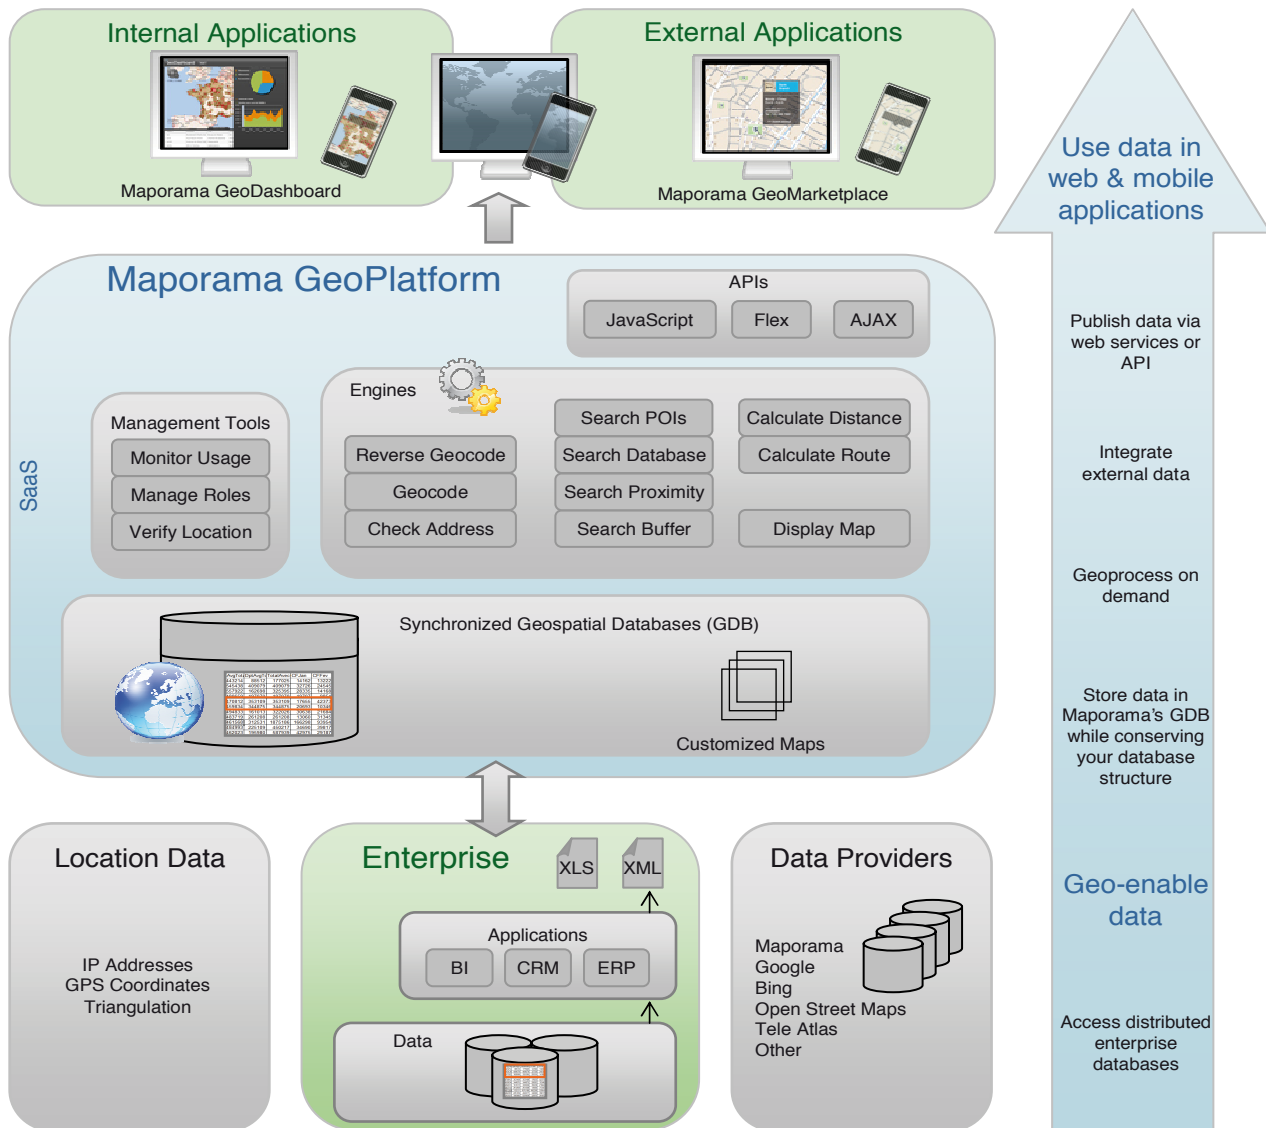

- Design table structures that mirror local databases
- Convert addresses into latitude/longitude coordinates
- View and analyze geocoding results on a single screen
- Verify or reposition locations on the map
- Publish an accurate set of global data
- Perform geoprocessing using Maporama's engines
- Export results as web services

Synchronize your solutions:

- Centralize access to disparate databases
- Connect mapping solutions to dynamic data
- Integrate rich media and automated news updates

Manage roles:

- Define users & roles as needed
- Create private views of data
- Publish a public view that merges information

Maporama GeoPlatform is provided as a SaaS solution, thereby minimizing your Total Cost of Ownership (TCO) & giving you access whenever you need it, wherever you are. **Maporama... because location matters!**
